HTML Challenge I

Reproduce the patterns presented below.
Don't forget to indent your code.
Use the W3C validator to ensure the quality of your code !
Side question: what is the w3c ?

Iteration 1 - Inline vs block elements

Write a paragraph containing some span or em tags of different colors. Spans are inline elements, meaning that their *default* display property value is *inline*. Those elements will follow the *horizontal* flow of a document. Inline elements go next to another inline element so you **won't** have any line break until you decide do insert one (like here with a br tag).

Images are inline element too ! That's a simple but *super important* point to remember ! Feel free to dif deeper with the MDN doc.

Iteration 2 - Simple list

1. Open visual studio code
2. Launch a terminal window
3. Open your browser
4. Open devtools
5. Start coding awesome apps

Iteration 3 - Simple table

Ace	Diamond
Heart	Spade

Iteration 4 - Nested list

1. level 1.1
2. level 1.2
   - level 2.1
     1. level 3.1
     2. level 3.2
     3. level 3.3
   - level 2.2
   - level 2.3
3. level 1.3

Bonus 1 - A more complex table

	Person	first group		second group	
		Singular	Plural	Singular	Plural
	1	i code	we code	i succeed	we succeed
present	2	you code	they code	you succeed	they succeed
	3	he/she codes	they code	he/she succeeds	they succed

Bonus 2 - Video player

Display a video player with control buttons.
Pick any file you want.

Extra:
Add a poster attribute to it.
Provide 2 files extension (webm and mp4) for full cross-browser compatibility.

Bonus 3 - Audio player

Display an audio player with control buttons.
Pick any mp3 file you like.

Extra:
Add a poster attribute to it.
Provide 2 files extension (webm and mp4) for full cross-browser compatibility.
